Fixture up with Inspection Arsenal® and Laser Arsenal® Loc-N-Load™ Fixture Systems and Make Production Faster Than Ever Before!

Inspection Arsenal®

From the spindle to the shipping dock, the ability to get inspection data back to the shop floor quickly and accurately improves the entire production pipeline—and your profits! Quality inspection no longer needs to be complex, costly and time consuming. Modular fixturing reduces downtime, running at risk, and overproduction.

Laser Arsenal®

The same unique design of Loc-N-Load™ provides the only dedicated, modular fixture system for laser marking and welding processes. Operators can quickly and easily fixture parts in v-groove or pocketed trays or create custom and semi-custom setups on standard plates using a variety of work holding components.

Loc-N-Load™ and Open-Sight™ - for Inspection and Laser Marking - A universal modular fixturing system that provides a complete arsenal of work holding for inspection and laser marking machines. The freedom of quick swap fixturing helps you inspect and process parts faster than ever before. Simple versatility removes the complexity and tribal knowledge related to part fixturing and enhances the value of these processes. Operators and less-skilled employees can now easily inspect and mark parts, leaving your high-level programmers to focus on more complex work. Deliver perfect parts faster with **Inspection Arsenal®** and **Laser Arsenal®**.

- Enjoy a rapid return on investment
- Process more parts per shift
- Create multiple quick-swap setups per machine
- Move fixtures from one machine to another
- Cross-train more employees, quickly.
- Adapt and reuse existing fixtures effortlessly
- Access granite or surface easily
- Use palletization techniques
- Work toward some lights-out processing
- Use as dedicated tooling - add it to your job box
- Ships immediately, as product is ready-made

"I love using the Loc-N-Load™ plates. They are fast, convenient, and reliable for CMM change overs. I recommend them to anyone using multiple setups in a fast-paced environment."
